Resume Scores

Category	Score
ATS Compatibility	85/100
Formatting	70/100
Grammar	80/100
Keywords	90/100
Professionalism	85/100

Weak Bullet Points to Fix

- Taught Python, AI/ML, and full-stack web development through hands■on, project■based instruction covering model building and applied AI.
- Mentored students through coursework and projects, building their foundation in programming and applied AI/ML.

Recruiter Verdict: Yes

Strong technical background and project depth justify a phone screen, but short employment history and incomplete credentials warrant caution.

Category	Score
Technical Rating	85/100
Communication Rating	80/100
Portfolio Rating	90/100

Pros

- Extensive hands■on project portfolio spanning LLMs, RAG, and computer vision
- Demonstrated ability to build end■to■end pipelines using modern frameworks (Agno, LangChain, PyTorch, FastAPI)
- Strong mix of software engineering (Python, JS, Docker, CI/CD) and ML expertise
- High keyword coverage and ATS score suggest resume is well■targeted
- Teaching role indicates communication skills and ability to mentor

Cons

- Very short formal employment history (3■4 months instructor only)
- No listed industry or industry■level projects beyond personal work
- Education details incomplete (graduation year missing)
- No certifications or continuous learning credentials highlighted
- LinkedIn profile appears empty, limiting external validation

Career Roadmap

Leverage your strong foundation in generative AI, multi■agent systems, and full■stack deployment to specialize as an AI/ML Engineer focusing on building and deploying production■ready LLM applications.

Target Roles: AI Engineer, Machine Learning Engineer, Generative AI Engineer, MLOps Engineer, Data Scientist, AI Product Manager (stretch), Cloud AI Solutions Architect (stretch)

Skills to Learn Next

- AWS Cloud Services (SageMaker, EC2, S3)
- Kubernetes & Container Orchestration
- MLOps practices (model versioning, CI/CD for ML)
- Terraform for Infrastructure as Code
- Hyperparameter tuning (Optuna, Ray Tune)
- Model deployment & monitoring

Projects to Build

- End■to■end MLOps pipeline: fine■tune a T5 model, version it with MLflow, and deploy on AWS SageMaker with automated CI/CD via GitHub Actions and Terraform.
- Kubernetes■deployed multi■agent AI system: containerize your Agno/LLM agents, orchestrate with Helm charts, and expose via FastAPI.
- Serverless RAG chatbot on AWS Lambda & DynamoDB: use LangChain, ChromaDB alternatives, and API Gateway for a low■cost, scalable service.
- Hyperparameter tuning suite for a reinforcement■learning DQN agent using Optuna, with results logged to Weights & Biases.
- Full■stack AI product demo: integrate a fine■tuned LLM backend (FastAPI) with a React front■end, CI/CD pipeline, and monitoring dashboards (Grafana).
