Resume Scores

Category	Score
ATS Compatibility	85/100
Formatting	80/100
Grammar	88/100
Keywords	90/100
Professionalism	80/100

Weak Bullet Points to Fix

- Taught Python, AI/ML, and full■stack web development through hands■on, project■based instruction covering model building and applied AI.
- Mentored students through coursework and projects, building their foundation in programming and applied AI/ML.
- Currently an AI/ML and Python Instructor.

Recruiter Verdict: Maybe

The candidate shows promising technical chops and relevant project work, but the absence of real■world experience and measurable impact warrants a phone screen to assess depth and readiness.

Category	Score
Technical Rating	85/100
Communication Rating	78/100
Portfolio Rating	80/100

Pros

- Extensive skill set covering modern LLM frameworks, RAG pipelines, and full■stack deployment tools.
- Hands■on projects that demonstrate end■to■end AI workflows (multi■agent resume analyzer, medical RAG chatbot, CI/CD enabled AI assistant).
- Experience teaching AI/ML and full■stack development, indicating ability to communicate technical concepts.
- Familiarity with production tooling: Docker, GitHub Actions, FastAPI/Flask, and vector databases.
- Good ATS compatibility and overall resume scoring (85 overall).

Cons

- No substantive industry work experience; only a 3■4 month teaching stint.
- Education entry lacks graduation year; no certifications or measurable achievements listed.
- Impact statements are vague—no metrics (e.g., users, performance gains, revenue) to validate project success.
- LinkedIn profile appears empty (all profile scores zero), limiting external validation.
- Breadth of listed technologies may mask depth; unclear how many are used proficiently versus superficially.

Career Roadmap

Leverage your strong LLM, RAG, and multi■agent system expertise to become a Generative AI Engineer or MLOps■focused AI Engineer building end■to■end AI products for enterprise.

Target Roles: Generative AI Engineer, Machine Learning Engineer (LLM focus), MLOps Engineer, AI Engineer – Retrieval Augmented Generation, AI Solutions Architect (stretch), Cloud AI Engineer (stretch)

Skills to Learn Next

- AWS Cloud Services (SageMaker, S3, EC2)
- Google Cloud Platform (Vertex AI, Cloud Run)
- Microsoft Azure AI services
- Kubernetes & container orchestration
- Terraform / Infrastructure as Code

- MLOps & Model Deployment pipelines
- Serverless architecture (e.g., AWS Lambda, Cloud Functions)
- Pinecone or other managed vector databases

Projects to Build

- End■to■end MLOps pipeline: fine■tune an LLM on SageMaker, version models with DVC, deploy via CI/CD (GitHub Actions) and expose via FastAPI on Kubernetes.
- Scalable Multi■Agent System: orchestrate LangChain agents in Docker containers, orchestrated by Kubernetes, with a GraphQL API for external integration.
- Serverless Retrieval■Augmented Generation chatbot on GCP: use Vertex AI, Cloud Run, and Pinecone for vector storage, with Cloud Functions for request handling.
- Real■time Anomaly Detection microservice: stream data through Apache Kafka, store state in Redis, detect anomalies with an online ML model, and alert via a Flask API.
- Full■stack AI product: React front■end, GraphQL back■end, AI inference service (LLM) hosted on Azure Container Instances, with CI/CD and automated testing.
